Dear Admission Committee,

I am writing to recommend Misha Saraf, a student of Ramniwas Bajaj English High School, for admission to your esteemed institution. She has been a student of our school right from kindergarten until class 10. As her Principal, I have witnessed her evolution into an exceptional young leader with a sharp, technology-driven mind. She has demonstrated a natural ability to lead with vision and purpose. She is someone who not only takes responsibility but elevates any project she is part of—academically, culturally, and socially. Her leadership is grounded in maturity, clarity of thought, and a genuine desire to create meaningful impact.

She intends to pursue her research in Computer Science. This ambition of hers is not a recent decision but the natural extension of a mindset she has demonstrated throughout her time here — one defined by analytical rigor, curiosity about emerging technology, and a genuine desire to put technical skill in service of real-world impact.

Academically, Misha has been exceptional. She was a consistent school topper, she secured an outstanding 98.8% in Grade 10 and has received the Best Student Trophy multiple times.What truly distinguishes her is her deep intellectual curiosity – she is drawn instinctively to logic, structure, and problem-solving, loves exploring subjects beyond the syllabus, seeks conceptual clarity, and approaches learning with a maturity that is rare for her age.

This aptitude has expressed itself concretely in her technical pursuits. She has excelled in several coding and tech-based competitions such as Robocom, Gizmo Geeks, and Go Coderz, achieving recognition at the interschool, state, and national levels. A visionary in every sense, Misha has also taken initiative to organise and conduct a four-hour workshop for our teaching staff on the use of AI in education — a forward-thinking effort that reflected her awareness of emerging tools and her commitment to enhancing the learning ecosystem of our school by confidently leading working professionals through hands-on tools and applications. It is an unusual undertaking for a student, and it reflects both technical fluency and the kind of forward-thinking initiative that Computer Science research demands.

One of her most important contributions has been her pioneering work in building a Model United Nations (MUN) culture in our school. She has chaired prestigious MUN conferences at the state, national, and international levels, and she took the initiative to introduce MUNs to our school community. She led delegations to various conferences,

mentored younger students, and played a central role in conceptualising and organising our first-ever intra-school MUN, which has now become a recurring platform for developing global awareness and public-speaking skills among students.

Her leadership extends seamlessly to other school activities as well. Misha has been instrumental in coordinating major events such as farewell functions, Teachers' Day celebrations, and cultural programmes. During her Scholastic Internship Programme, she impressed her mentors with her professionalism, assisting with coordination, marketing, technical tasks, and presentations. She consistently brings structure, creativity, and reliability to everything she undertakes.

Her strengths also extend into the creative and analytical domain. She has published a book on understanding climate change on BriBooks, written specifically to help young leaders recognise that climate change is not a distant threat but an urgent issue requiring immediate awareness and action.

Misha's dedication to social responsibility is yet another defining aspect of her personality. She has participated in beach clean-up drives where she contributed to waste collection. She helped selling handmade diyas and running a food stall, where all proceeds were donated to NGOs supporting underprivileged communities. She educated buyers about how their contributions would support ongoing welfare efforts.

Beyond all these accomplishments, it is her character that truly stands out. Misha is humble, thoughtful, compassionate, and deeply committed to excellence. She always steps forward when help is needed, and she approaches every task—big or small—with sincerity and dedication. She balances academics, leadership roles, and social initiatives with remarkable discipline and grace.

It is without reservation that I recommend Misha Saraf to your institution. She is a dynamic young leader with a genuine aptitude and passion for Computer Science, who has the potential to excel globally and contribute meaningfully to any community she becomes part of. I wholeheartedly endorse her.

Sincerely,
